

CABAMIX

Compound Producers

CONTENT INDEX

SUMMARY

Brief summary of threats and opportunities

SWOT

Focus on the opportunities and threats

COMPETITIVE ADVANTAGE

of Cabamix

Indicator	Sweden	Denmark	Finland
Carbon Neutrality Target	Net-zero by 2045	Net-zero by 2050 (–70% by 2030)	Carbon neutral by 2035
Plastic Packaging Recycling	55% by 2025 (min. EU target) ; investing in advanced sorting	55% by 2030 ; new high-tech sorting plant to cut incineration	55% by 2025 (EU target) ; strong EPR enforcement
Recycled Content in Packaging	30% avg. recycled content in plastic packaging by 2030	(Follows EU proposals; national strategy encourages recycled content)	(Follows EU proposals; promoting recycled/bio-based materials in plastics roadmap
Compostable Plastics Policy	Cautious – use compostables only where organics are collected; AD is common, risk of mis-sorted biodegradables being incinerated	Restrictive – allowed only if sent to industrial compost/biogas facility	Moderate – allowed for bio-waste bags in some areas , but generally not included in recycling; focus on cases with clear benefit (e.g. reducing food waste)
Sustainability Priorities	Circular economy strategy, “Stop non-recyclable plastic” campaigns, deposit systems (90% bottle return) , climate-smart innovation funds	Circular economy action plan, eco-design guidelines for packaging (prioritize reuse/recycle over compost), high environmental awareness among consumers	Circular economy & bioeconomy leaders (first national CE roadmap), innovation in bio-based materials, government and industry investment in sustainable tech (e.g. Sitra fund, Business Finland programs)

Opportunities Vs Threats

Regulatory Compliance Costs

- Adapting to PFAS rules may demand major R&D investment for product reformulation.

Market Access Limitations

- Adapting to PFAS rules may demand major R&D investment for product reformulation.

Supply Chain Disruptions:

- PFAS restrictions may impact raw material supply, requiring supply chain adjustments.

OPPORTUNITIES

THREATS

Alignment with Regulatory Trends

- Sweden has proposed broad PFAS restrictions under the EU REACH regulation.

Market Leadership in Sustainable Solutions

- Swedish companies drive the green transition through innovation in energy and sustainable materials..
- Sweden's commitment to sustainability offers potential financial incentives and support for companies adopting eco-friendly practices.

OPP/ THREATS DENMARK

REGULATORY CHANGES 2030

- **Mandatory Use of Recycled Content:** Companies may be required to include a minimum amount of recycled materials in their products.
- **Higher Taxes on Virgin Plastics:** The government plans to raise taxes on non-recycled plastics to promote sustainable alternatives.
- **Stricter Recycling Targets:** Denmark will increase recycling goals, which will push businesses to use more recycled and compostable materials.

OPPORTUNITIES

- Denmark will increase rules on plastic waste and carbon emissions. This will grow the demand for recycled and biobased compounds.
- The Danish government gives strong support to green projects. Compound producers can get subsidies. They can also receive tax benefits to reduce their costs.
- Many companies in Denmark must follow green goals. Producers can sell eco-friendly compounds to help these companies follow the rules.

THREATS

- New rules in Denmark have the tendency of becoming stricter. These rules can make compliance more expensive for compound producers.
- More companies will enter the market for green materials. This will increase competition. It may also push prices down.
- The supply of recycled raw materials may not always be enough. If shortages happen, producers will face higher material costs.

OPP/THREATS FINLAND

Opportunities

- Finland aligns with EU Circular Economy and Plastic Strategy directives, targeting carbon neutrality by 2035.
- Access to government R&D funding for bio-innovation.
- EU support for chemical recycling & compostable regulation boosts Cabamix's unique formulation.

Threats

- Regulatory Compliance & Certification Costs: Strict Finnish and EU standards increase costs for certification and testing of compostable materials.
- Consumer Skepticism Toward Greenwashing.
- Raw Material Disruption & Pricing Pressure: Demand for recycled biopolymers may lead to raw material scarcity.

Regulatory Changes

- EU Green Deal & Finnish Bioeconomy Strategy.
- Cabamix products may be favored as Finland aligns with EU-wide bans on single-use plastics and taxes on non-recyclables.
- Chemical Recycling Recognition.

COMPETITIVE ADVANTAGE **VRIO**

To find a competitive advantage, it
must be VRIO

V

Valuable

Does the advantage bring strategic value to the company?

R

RARE

Is the advantage rare among competitors?

I

INIMITABLE

Is the advantage hard to imitate?

O

ORGANIZED

Is the company organized to exploit this advantage?

Competitive Advantage

Scanfill

Mineral Filler Expertise & Portfolio Breadth

Cabamix specializes in **combining high-grade mineral fillers (e.g. calcium carbonate, talc, silica)** with polymers. This expertise allows for **tailor-made properties** (improved mechanical performance, process stability, and reduced carbon footprint) that some competitors cannot match as directly.

Competitors like Gaia, Scanfill, and Polykemi also work with mineral fillers (e.g., chalk or limestone), but Cabamix's longstanding R&D background in mineral modification (originally through JM Polymers) provides deep **technical proficiency** and helps differentiate on process improvements (extruder pressure reduction, bubble stability in films).

In-House R&D and Customization

Quality control (spectrophotometer, FTIR, DSC, TGA, mechanical testing) and a **technical center** (blown film, thermoforming, injection molding lines) for **application trials**.

Proven Large-Scale Capacity & Supply Assurance - High Throughput & Storage

70,000+ tons capacity and **2,500+ tons of final product storage**, Cabamix can offer **consistent supply and quick turnaround**.

Cabamix's dual sites (Saint Romain Lachalm and Cabannes) support reliability and **risk diversification** – important for large buyers seeking stable supply chains.

Cost Efficiency Through Mineral Loading

It designs tailor-made mineral compounds that comply with local **PFAS-free** standards, offering flexible and cost-effective technical solutions, unlike competitors' standardized products.

Scanfill promotes a similar chalk-based approach for cost reduction, but Cabamix can leverage its **multiple filler types** (calcium carbonate, talc, silica), - **finely tuned mineral fillers**, Cabamix can **lower raw material costs** and reduce **energy consumption making it sustainable**

Is it Sustainable ?

Mineral Filler Expertise	R&D+Customization	Large Scale Capacity	Cost Efficiency
Mineral fillers make it possible to formulate plastics that comply with strict regulations (e.g. PFAS-free), while meeting growing expectations in terms of sustainability and eco-design.	Building the same level of in-house R&D requires a lot of time, money, and expertise. Competitors can't easily copy this setup, and Cabamix can keep improving it to stay ahead which proves its economic sustainability.	As a large capacity plant, it is sustainable if combined with supply chain and delivery excellence. But if it has long term stock, it's hazardous after a limit and causes waste	Lower Costs & Energy Use: Multi-mineral fillers cut polymer and processing costs. Lower CO₂ Emissions: High mineral content reduces carbon footprint.

FRENCH PLASTIC BIO AND MINERAL COMPOUND FIRM

BUSINESS STRATEGY

CABAMIX_G01_T05

TABLE OF **CONTENTS**

- Business Strategy 1
- Corporate Strategy 2

OUR **BUSINESS STRATEGY**

**Transition to a circular
economy business model**

OUR OBJECTIVES

Development and production of bio- and mineral-based compounds

Post-consumer recycled materials

Local bio-sourced raw materials (e.g. Scandinavian wood fibres)

Regional industrial by-products

Creation of a take-back and recycling offer for end-of-life compounds

A STRATEGY ALIGNE WITH NEW REGULATIONS

This strategy will bring us into line with the legal restrictions in Scandinavian countries:

- Swedish law on extended producer responsibility
- Danish recycling targets (65% by 2025)
- Finnish regulations on the use of recycled materials

IMPACT ON GROWTH TARGETS

Competitive advantages:

- Premium positioning in a fast-growing market
- Easier access to public contracts (environmental criteria)
- Lower costs thanks to local tax incentives

Market opportunities:

- Growing demand for sustainable and bio-based compounds
- Integration into the recycling network and circular economy
- Government subsidies and incentives

ACTION PLAN

- **Stage 1 (Audit)**

Audit of current materials

Identification of local sources of recycled materials

Development of the first circular formulations

- **Stage 3 (Label)**

Certification of new products

- **Stage 5 (Optimization)**

Optimization of recycling processes

1st Year

2nd Year

3rd Year

4th Year

5th year

- **Stage 2 (Installation)**

Installation of recycling units

Creation of partnerships with local collectors

- **Stage 4 (Expansion)**

Expanding the collection network

Developing new sustainable solutions

CORPORATE STRATEGY

OUR **CORPORATE STRATEGY**

**Collaborative R&D
Development**

OUR OBJECTIVES

Strengthen R&D expertise

Develop in-house skills and technologies related to eco-friendly materials and innovative manufacturing processes

Foster strategic partnerships

Collaborate with industrial players, research centers and other partners to pool skills and accelerate innovation

Stimulate new product development

Leverage advances in sustainable packaging to design new products that meet emerging market needs and environmental challenges.

CORPORATE STRATEGY - SPECIALIZATION

A brand new strategy at Cabamix

- Focus on a specific, high value-added area
- Strengthen a differentiated competitive advantage
- Optimize resources and internal synergies

IMPACT ON GROWTH TARGETS

Competitive advantages:

- Market differentiation
- Reducing costs and boosting efficiency
- Rapid expansion through alliances

Market opportunities:

- Growing Consumer and Regulatory Demand
- Innovation and Cost Efficiency
- Market Differentiation and Brand Value
